

## Paradigm's New Monitor Series Subwoofers Are Here!

Paradigm has introduced a new line of Monitor Series powered subwoofers. There are a number of innovations trickled down from its more expensive subs. These are all designed, engineered and manufactured in Paradigm's factory in Toronto!

**Corrugated Santoprene Surrounds**  
Traditional subwoofers have traditional rolled, rubber surrounds. They're OK.

A couple years back Paradigm introduced its Corrugated Santoprene Surround technology into its Studio Series subs. {Sub 15, \$3200, Sub 12, \$2300 & Seismic 110 "The Bulldog", \$1500} The big boys have successfully employed this technology for a few years.

Corrugated Santoprene Surrounds have longer excursion capability. Not only are they faster than rolled surrounds, but they can achieve higher SPL with less distortion. Santoprene is lighter and more pliable than butyl rubber, yielding better definition.

**Injection Molded Carbon Loaded Polypropylene Cones**

"All" the other guys sell you subs of paper or plastic design. They're OK.

Paradigm has introduced die cast drivers with cones comprised of a third Carbon and two-thirds Polypropylene to achieve a better stiffness to mass ratio= cleaner bass production. Note the surrounds are molded over the driver frames, not just glued to the edge- like everybody else.

**Sealed Cabinets**

Sealed cabinets keep bass tighter. Paradigm has used ports in modestly priced subs over the years to squeeze more bass out of them. Due to the advantages of the Corrugated Santoprene Surrounds, Paradigm can achieve the output it wants while sealing the cabinets. We think you'll find the balance of deep, yet tight bass, quite impressive.

**Muscular Amps**

All these new subs use *Paradigm's own* on board, 300w (900w peaks!) MOSFET power amp.

**Perfect Bass Kit \$100**

Paradigm's Perfect Bass Kit (PBK) allows you to dial in the performance of these Paradigm subs into YOUR listening room. The PBK, a room correction bass innovation, reads the response of the sub *in your room* and then contours an EQ curve to provide optimal balance. The result is strong bass without traditional booming.

Wireless Operation, PT-2 \$150

The PT-2 allows you to run the new Paradigm Monitor Series Subs wirelessly! Transmission length is approx 50'.

## **Models**

**Monitor Series Sub 12** \$1000 (Black Ash Only) 15 1/8h, 13w, 14.5d, 65 lbs

OK. This is the one you want! It's THE GOODS! With larger voice coil and greater (1.5"!) excursion than its little brothers, Sub 12 offers the best value in the line!

**Monitor Series Sub 10** \$850 (Black Ash Only) 13h, 11 1/8w, 12.75d, 54 lbs

Nice muscle from a smaller size but... Sub 12 is only \$150 more!

**Monitor Series Sub 8** \$700 (Black Ash Only) 10 11/16h, 10 5/16w, 11 1/8d, 40 lbs

When you're tight on space, Sub 8 still packs a wallop!
