

Paradigm Studio Series Speakers

Paradigm has always made great speakers! Its Studio Series, running from \$1000pr to \$3500pr, have been at the top of the pyramid at their price points for years. But they're getting even better.

What's unique about the Studio Series compared to the other guys? First of all, these are made BY PARADIGM, IN CANADA, from the ground up. That, is a fine start, but no guaranty for high quality. The vast majority of competitors in this price range are sourced out from China. Due to Paradigm's demand for TLC, they do some things that nobody else does in this range.

Cabinet construction is of thick MDF- finished in real wood, not vinyl! Cabinet finishes are gorgeous Cherry, Rosenut, Black Ash or Piano Gloss Black. You'll note that the cabinets are curved to control and tune cabinet resonance precisely.

The drivers are made by Paradigm in Canada. They don't just purchase a pile of drivers from SkanSpeak and screw them into a box. Paradigm uses Carbon Infused Polypropylene woofers for extreme rigidity. Paradigm uses Satin Pure Aluminum metal alloy midrange drivers. Paradigm uses Pure Aluminum Dome tweeters.

Paradigm realizes not everyone has plenty of muscle. These speakers are highly efficient. You can drive them nicely with 50x2. But of course, the more the merrier. There is no downside to higher power, all things being equal.

S-10 \$1000pr (12h, 7 7/8w, 11 7/8d) \$1100pr Gloss Black

This 5.5" 2-way is a real LS-3/5a beater. It's a small cabinet that sounds warm and full.

S-20 \$1400pr (14 5/8h, 8 7/8w, 13 1/8d) \$1500pr Gloss Black

S-20 is the best value in a small speaker out there! This 7" 2-way has a much bigger midrange and fuller bass response than S-10. If you can swing the size, you want S-20!

S-60 \$2400pr (40 1/8h, 7 7/8w, 11 7/8d) \$2600pr Gloss Black

S-60 is the first tower in the line. It runs two 5.5" woofs, a 5.5" mid and one tweeter. It has strikingly LARGE sound for its footprint. If we play this guy and tell you the subwoofer is on over in the corner, you'll believe us (even when it isn't!).

S-100 \$3500pr (44 1/8h, 9.5w, 17d) \$3800pr Gloss Black

With S-100, we make no apology for having a big time tower! S-100 uses three 7" woofs, a 7" mid and one tweeter. The power produced by S-100 will even please demanding theater owners. While S-100 can get up and rock the house, its balance at modest levels is rich and warm. You won't feel as inclined to crank this guy up because it delivers the muscle even at moderate volumes. Then when your wife leaves the house, crank it up!
