Bryston Model T Signature Speakers - Demo

Tue, Mar 26 2013

Spent about 2 hours, mesmerized by these wonderful Bryston speakers.

All the clarity, highs and mids that I enjoyed a couple of weeks back were still there. But this time around, the low end was really refined but still gutsy enough to give that thumping to your heart. It was really tonally balanced regardless of what music genre you play. And we really played today. Even the dealers were excited them-selves but I was even more excited. Today, these speakers were driven by the pair of BP17 pre amp and the 4BSST2 power amp. Wired by of course, WyWires. Source was through BDP2 and BDA2.

We threw in Dire Straits, CCR, Pink Panther theme, Metallica, Stan Getz and Gilberto, The Eagles etc....MP3, WAV, FLAC, hi res.....and the speakers just smiled at us, performing its best (though can't wait to listen to them in the AV show this year in a bigger room). We played it loud today and the bass was so refined and detail and did not muffle at all. Each bass-line and kick pedal was clear, solid with no sign of distortion. And it did not overshadow the clarity and crispiness of the mids and highs.

It was goodddd !!!!

The one thing that really stood out was on the wind instrument. I think it was a clarinet playing. I can even hear the extent of the musician's breath to play those long notes.

You guys just need to experience these speakers for yourself.
