

Rogue Pharoah Now In!

It's good to be king!

Rogue Pharoah Integrated Amp, \$3500, 185x2

Designed/Built in Pennsylvania

Rogue's new Pharoah integrated amp was not created JUST to be a steal of a deal. But it is! Integrated amps offer the best electronic values in high end audio. Pharoah gives you a one box solution for very serious audio performance. By pairing a marvelous preamp and amp on a single chassis, it just happens to land at a great price. But please, don't think the Pharoah isn't an upper echelon product just because it's quite the bargain. It's a combination of tube refinement and big solid state horse power.

First of all, if you've dabbled in our hobby for any length of time you've learned that there is no substitute for power. You've *got to have it*. Literally any speaker wakes up with a strong kick in the pants instead of modest wattage. The Pharoah weighs in at 185x2 (350x2 for you Maggie owners) and can drive virtually any speaker very well.

Pharoah uses a large Toroidal transformer and Mundorf EVO oil filled coupling caps. It has two 12AU7 tubes in the line section. The phono section is outstanding and will support MM & MC (40-60dB gain). The phono is NOT an afterthought! Pharoah features three high level, RCA inputs. It also has one set of XLR inputs.

Pharoah has an excellent on board tube driven headphone 1/4" jack.

Pharoah has two preamp outs, one variable and one fixed.

Pharoah has a HT bypass loop.

6.5h, 18.5w, 18d, 40 lbs, Built in USA!

Rogue chooses NOT to put a DAC on board because the digital world is a moving target of handshakes. Hence Rogue says, buy your DAC as an outboard component. That way you can change as the market changes.
