DECEMBER 2023

2024's Best Power Amplifiers

BRYSTON 4B³ CUBED

This classic 300 wpc Bryston amplifier is back in its “Cubed” edition—but if you think you already know what a 4B sounds like you need to revisit this beloved Canadian brand.

The Cubed line uses the vaunted Salomie circuit in every model, which features “a low-noise input buffer that’s super-linear... this patented circuitry reduces RF and audio interference.” Astonishing build quality.

“Yes, the 4B is still a major force in amplification in 2021,” and we think it’s one of 2024’s best power amplifiers.
